
Are "XXX50" z305 records necessary?

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Description:

In our local patron data we see that every patron has (in addition to actual sub-library) privileges in our ADM ABC50. Are these records needed?

Resolution:

The records for ABC50 are created hardcoded and mandatory for some fallback-functionality and may be needed for PDS. We advice against deleting these records.
