

Can you can form 008 in two columns

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Is it possible to define a form for the 008 that displays bytes 00-020 in the first column and the remaining bytes in the second column? The labels and boxes have be defined that way (see attached), but 008 data isn't displaying in the correct boxes, and selecting Tab moves the cursor across from left to right rather than up and down.

Resolution:

The fixed field form cannot be changed in this way. The order must be from left to right, and top to bottom as shown in the example.

The 'Syslib Guide - Cataloging' documentation has been corrected to reflect this fact.
