
How do I run Sip2 and JBOSS at the same time

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Description:

I had a previous incident (KB 16384-34644) in which I inquired about a SYS50 tab100 setting. It seems that to run a sip2 server to use for authentication purposes I need to set the DOC-TYPE-ADM=Y. But to run JBOSS I need to set the DOC-TYPE-ADM=N.

Resolution:

Corrected by:

v20 rep_change 3582

v21 rep_ver 17659
