Description:

It appears that our converted item records have no z30_call_no_key or Z30_call_no_2_key fields.

Can you confirm that running p_item_06 is necessary for the proper running of the Items Module Shelf List report?

Resolution:

Yes, p_item_01, p_item_04 and p_item_05 will not work unless the z30_call_no_key is properly populated. p_item_06 is the job which does this -- though it may be that it was run some time ago and the z30_call_no_key's have been kept up-to-date.

You can do this SQL to see how many are missing:

```
> s+ xxx50
```

```
SQL> select count(*) from z30 where z30_call_no is null or z30_call_no like ' %'
```

```
SQL> select count(*) from z30 where z30_call_no_key is null or z30_call_no_key like ' %') ;
```

Then subtract the second count from the first to see how many are missing.
