

## SSL: ILL and hold request

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 15.2
- 

### Description:

How can is the login and hold request pages to be supported via SSL for Interlibrary Loan?

### Resolution:

To set up Inter-library loan login and the login when the user wishes to place a hold request but has not previously logged in go through SSL, you have to change the html page in a similar fashion as the login page has been changed.

- 1 - Identify the pages to change
- 2 - in the form, replace in the action `&server_f` with `&server_f_ssl`
- 3 - Immediately after the `<form .....` tag, add the following line:  
`<input type="hidden" name="ssl_flag" value="Y">`

This should be enough.
