

## OPAC not always display full field

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

**Problem Description:**Cataloging limits data entry in a field to 1991 characters, not 2000 and the full record view in the opac only displays less than that – in the example below it is the first 1961 characters.

**Actual Results:**When 1991 characters are entered in the Cataloging GUI then the OPAC display shows the field label and characters from the field totalling 1971 characters.

**Expected Results:**2000 characters can be entered in the Cataloging GUI and all 2000 characters are then displayed in the OPAC plus the field label

### Resolution:

Corrected in version 21
