## p\_arc\_01: 226 671 ORA-00001: unique constraint (.) violated

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We get the following error when trying to run p\_arc\_01 - ./abc50/scratch/p\_arc\_01\_transform.log :

```
FINISHED FINISHED 317 tasks of 360
```

```
1 row selected.
```

```
PROCESS_CODE TASK_CODE ERROR_MESSAGE
```

```
226 671  
ORA-00001: unique constraint (.) violated
```

```
226 671  
ORA-00001: unique constraint (.) violated
```

Can you advise, it seems the data transfer to arc is incomplete?

### Resolution:

The error occurs due a duplicate entry in pc\_tab\_exp\_field.lng. Even though the error appeared, the ETL process did end fully and all the data exists.

For example, a site had:

```
P-ACQ-02-01 L Invoice status 044  
P-ACQ-02-01 L Invoice status 044
```

Deleting the second occurrence corrected the unique constraint violated.

In another case the site had the following lines for ACQ\_ARRIVAL\_STATUS (some with underline, others with hyphen -- both are accepted):

```
>>grep ^ACQ.ARRIVAL.STATUS pc_tab_exp_field.eng  
ACQ_ARRIVAL_STATUS L Komplet CMP  
ACQ_ARRIVAL_STATUS L Delvis PTL  
ACQ-ARRIVAL-STATUS L Komplet C  
ACQ-ARRIVAL-STATUS L Delvis P
```

Therefore, there is a duplicate entry for Komplet and for Delvis. This duplicate entry causes the error messages. Please correct your pc\_tab\_exp\_field files so that only one entry for each arrival status will exists, and the ETL process

should have no more errors.
