
What is Z00H? How should tab100 CREATE-Z00H be set?

- **Article Type:** General

Description:

There is a CREATE-Z00H parameter in tab100. We do not have this parameter defined, so it has been defaulting to "N".

What is the Z00H? Should we have "Y" instead?

Resolution:

The Z00H (Z00 History) table is part of the Central-Local Cataloging model used primarily by German consortia. It is optional for other customers.

As described in KB 8192-3555, it *could* be of use in seeing what certain deleted records looked like before they were deleted.

I suggest that, if you have the space, you define this (util a/17/1) and change CREATE-Z00H to Y. (Note: If you do this make sure that you do the util a/1/17/1 for Z00H -- and not, for instance, Z00 !)
