
p_manage_02_x: stalled in pc_manage_02_x.cycles creation

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

The p_manage_02 job has stalled in creating the \$data_scratch/p_manage_02_x.cycles file.

Cycles 1-10 look OK but cycles 11-24 are exact repeats of cycle 10 ("24829 XYZ LZZZZ BEST COMPANY 24829 XYZ LZZZZ BEST COMPANY").

Resolution:

I believe this is happening because (as seen in util a/17/14) the z01_id Oracle index does not exist. The \$aleph_scratch/p_manage_02 log shows that there was an error at the end of the p_manage_02_a.:

```
SQL-ALEPH_ADMIN> CREATE INDEX BCL01.Z01_ID ON BCL01.Z0 1 (Z01_REC_KEY ASC) *.
```

```
ERROR at line 1:.
```

```
ORA-01652: unable to extend temp segment by 128 in tablespace TEMP.
```

I suggest that you:.

- 1) kill all manage_02 processes.
 - 2) build the z01_id (and z01_id5).
 - 3) run p_manage_17 (p_manage_17 does exactly the same long-headings processing that p_manage_02_x is trying to do....)
