

Making tab20 changes take effect

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We have made some corrections to values in /xxx01/tab20.

What do we need to run to correct the indexes?

Do we need to rerun browse indexes?

Resolution:

You have three choices to make tab20 changes take effect:

1. Run the complete Headings index suite: p_manage_102, p_manage_02, etc.
 2. Start the bib library ue_08 in run mode "N" -- which sets all Z01s to "-NEW-", with no authority link and rechecks all headings to create authority links. (Note that when all Z01s are set to NEW no references will appear in the OPAC.)
-

Additional Information

tab20, update headings
