

## p\_manage\_50 generates 3-digit barcode

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

The barcode produced by p\_manage\_50 is only 3 digits. Is there any way to have the barcode look like a regular system-generated barcode?

### Resolution:

As noted in KB 8192-10711: " p\_manage\_50 grabs the next "sequence" number for "last-barcode-number" from the Z52 table. There does not appear to be any configuration option for changing how it generates barcodes. "

I see this in the abc50 util g/2:

4. last-barcode-number 499 y S

You could change this last-barcode-number to a higher/longer value -- as long as the potential numbers don't conflict with existing barcodes.
