

Print Configuration with Task Manager

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

I want to both email and print each notice using Task Manager / Print Daemon. It appears this can only be done when printing from the file list using print configuration.

Resolution:

1. Have a file containing a letter, designed to be emailed. It should have a Print ID extension, for example overdue_letter.email.
2. Have this entry in alephcom/tab/print.ini, where col. 1 has the Print ID name, and col. 4 is set for 'B' (both):
email 00 N B email
3. Open the relevant module, e.g. circ.exe, the printer is set to Normal Printing, and activate the Print Daemon.

This lets the letter to be both emailed and printed.

See SKB--7198 for a detailed explanation.

Additional Information

print daemon, printing
