
p_ret_10 cross files gives different results than client cross

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

I have two files: AAA and BBB. I'm finding I get different results when using the ret-10 and the Cross function on the Search panel within the Catalog client.

Shouldn't ret-10 produce the same results as Cross feature within the Gui search panel when matching operators are used in each tool?

Resolution:

The files in set are sorted by system number, while numbers in the GUI results sets are sorted according to the default Sort Options. Sort the input files with p-file-21, with the same sort options as in the GUI, and then compare the results.

[from site: sorting the files gave same results as in the GUI search]

Additional Information

ret-10, ret_10, sort, cross
