

PrintExecute setup in alephcom.ini for unsent e-mails

Description:

We have just implemented the EMAIL-ONLY setting in the .trn file for our courtesy notices. It works fine, and notices for patrons with no e-mail address are correctly put in the directory /print/no_email.

I was wanting, out of interest, to print preview one of these on my pc, but it doesn't work. If I move a file back into the print directory and do it from task manager (which works in every other situation), I get an error message "Print Execute command PLAIN,L01 not defined in alephcom.ini."

I can find no mention of this in the documentation for alephcom.ini. I can see that the xml files are actually missing the initial line "## - XML_XSL", but if I subsequently look at the failed print in Print History, it now has the initial line "## - PLAIN,L01."

So my question is, is there any way of printing these rejected files? I can imagine occasions when we would want to send an occasional printed one out.

Resolution:

Unfortunately, it is impossible to gain these two things together: to use the functionality in order to filter out those forms without specified email within and put them in another directory in the one hand and leave the XML_XSL at the header in the other hand.
