

## Indexing changes not taking effect

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We are working on indexing the \$\$t in the formatted 505 fields. This is working well on test, but the records we have run through util f/1/13 on prod are not displaying the \$\$t titles.

### Resolution:

ue\_01 had not been restarted since the changes were made to tab11\_xxx.

You need to do util e/2; verify with util c/1 that all three ue\_01 processes are stopped; then do util e/1 to restart.

( Note: If util e/2 doesn't stop the processes, use kill -9 to kill them. Example: You see this in util c/1:

```
30979 ? S 25:47 /exlibris/aleph/a18_1/aleph/exe/rt32 ue_01_a ABC01.a18_1
```

and util e/2 won't stop it, do this to kill it:

```
kill -9 30979 )
```
