Description:

Can Order Title index handle non-filing indicators? And if yes, how?

Resolution:

The Order Index definitely seems to be set up to handle non-filing indicators.

`./butil/b_acq_04_a` calls `./acq/update_z79` which calls `./acq/build_z79_fix_non_filing`.

`build_z79_fix_non_filing` reads `tab01.<lng> col. 6` (filing indicator) and, it seems, uses this `col. 6` value to skip the non-filing characters.

You can see whether it is *actually* doing this by:

```
dlib xxx50
util f z79
enter start Z79 key (CCCCCTTTTTTTTTTTT...)
TIT THE <there's a space following the "THE">
```

You may see some cases of initial "THE"s --such as foreign languages where the indicator is not set-- but, in the cases where the indicator is set, the characters should be skipped.
