

## Print to ADM Library needed for shared databases

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 17.01
- 

### Description:

In our MultiADM environment, when libraries create files from Services in the Cataloging Module, they cannot find the file. For the shared libraries of the xxx10 and xxx60 libraries, none of the services have the box to checkmark called "Print to ADM Library". The created file goes to the alephe/scratch directory. But the file does not come into the GUI client Task Manager File List. We need the box added to all the service workforms for xxx10 and xxx60.

### Resolution:

Add relevant line to \$alephe\_tab/library\_relation. Please see attached document for detailed instructions
