Desired Outcome Goal:

Create a backup file for a *znn* table before making a general change in the data

Procedure:

- * From the GUI Services menu, highlight "Manage Database Tables" in the dropdown list and then select Export Database Tables (file-03) service.
- * The following values must be included
 - ** *Table to Export:* *znn*
 - ** *Procedure to Run:* *Go (default option)*
 - ** *Number of Records per File:* *999999999 (default option)*
 - ** *File format:* *Fix (default option)*
- * From the Library drop down menu select the relevant database *xxxnn*
- * The service creates an output file in the *./xxxnn/files* directory. The file name given will be the name of the table selected, with the addition of the suffix *.seq[a-z][a-z]*, for example, *xxx37.seqaa*
