
p-cir-32 is not taking 000 as value in days retained

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

p-cir-32 gives an error if the number of days retained is '000'. It appears the smallest value it recognizes is '001'. In version 14, util_f_23_04_b could use a variable of '0000' - which is what we want.

Error is:

Param Errors Found:

F02: Number of Days to Retain - must be numeric.

Param Initialization Failure, Exiting !!!

Is there a way to run p-cir-32 so that everything is scrubbed, i.e., the number of days retained is zero?

Resolution:

There is no way to specify zero days to retain in p_cir_32.

001 is the minimum

Additional Information

p_cir_32
