## p\_ret\_01 for 856 field retrieves too few results

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

I want to retrieve records with an 856 tag with "\$\$u<http://lib-proxy.abc>". I ran p\_ret\_01 like this:

```
setenv p_code "856"  
setenv p_sub_code_a "u"  
setenv p_text_from_a "http://lib-proxy.abc"  
setenv p_text_to_a "http://lib-proxy.abcz"
```

but it retrieved only 101 records and I know there are many more.

### Resolution:

This p\_ret\_01 is retrieving only 856's with blank indicators, while most 856's have non-blank indicators.

You need to specify "856###" as the Tag, so you have:

```
setenv p_code "856###"  
setenv p_sub_code_a "u"  
setenv p_text_from_a "http://lib-proxy.abc"  
setenv p_text_to_a "http://lib-proxy.abcz"
```
