
Authority fix_doc_aut_008_pos_29

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Description:

I've had a recent question from staff about the 008 pos 29 value getting "flipped" to another value on saving to the server. In looking at our XXX10/tab/tab_fix I see the following line. I can't find a definition for what it does in the System Lib. Cat guide for v.18 or v.20. Is this something I just made up or did it come from v.16? And what does it do?

INS fix_doc_aut_008_pos_29 600,450,200,100

Resolution:

As described in KB 30535, this fix_doc was introduced with version 20 rep_change 3026.
