

cannot create regular file"; "can not be unzipped"

- **Article Type:** General
 - **Product:** Aleph
-

Description:

When I try to copy a file in unix, I get this "cannot create regular file" error:

```
> cp -p pc_cir_c0408.cbl.enc.gz xxxxxx  
> cp: cannot create regular file `xxxxxx': Permission denied
```

Also, in decrypting, I get: "Error: File xxxxxx.enc.gz can not be unzipped"

Resolution:

This was occurring at a consortium with six libraries, each library having its own login. In order to do things in the a-tree, you need to be logged in as "aleph".

Note to Ex Libris staff: There should be an sshmenu choice which lets you log in as aleph.
