## manage-31 fails with error 114

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18.01

---

### Description:

p-manage-31 fails with the following error in the log:

```
Execution error : file '/exlibris/aleph/a18_1/aleph/exe/tab01_get_m.gnt'  
error code: 114, pc=0, call=1, seg=0  
114 Attempt to access item beyond bounds of memory (Signal 11)
```

### Resolution:

We found that the ERR library (a library on which the rejected records are written) in the library\_relation table was ABC19:

```
ERR ABC10 ABC19
```

Although the abc19 library was open, and we could dlib to this library and see its tables, abc19 was not defined in the aleph\_start.private:

```
The command "echo $aleph_libs" did not show abc19.  
The error probably occurred when trying to load tab01 from abc19.
```

When added abc19 to the ALEPH\_LIBS in aleph\_start.private, the p-manage-31 ran correctly with no errors.

Also, please remember to restart the batch\_queue in the aut library where p-manage-31 is run.

---

## Additional Information

tab01\_get\_m, manage\_31, manage-31
