
io_z35_write ... table or view does not exist

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Description:

You see these error messages in the pc_server log:

Error: Load: .../xxx10/tab/tab_events.eng

Oracle error: io_z35_write

ORA-00942: table or view does not exist

Resolution:

These messages occur when someone is searching an xxx10 authority library.

Though the main use of the z35 events table is for Circulation statistics, the system does also want to write records for OPAC search events (z35_event_type's 10, 11, and 12) for BIB and Authority libraries.

If you want to record Authority library search events, then you can define an ./xxx10/tab/tab_events.eng table and add z35 to the ./xxx10/file_list.

If you don't want to record these events and want to prevent the error messages, then you can define an ./xxx10/tab/tab_events.eng table with these lines in it:

10 N Search Command

11 N Search command beyond limit

12 N Search command with zero hits

Additional Information

pc_server, log, error
