
p_manage_18: re-imported records don't match

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Description:

We are reloading records sent to a vendor for TOC (Table of Contents) processing. We find that rather than overlaying the BIB record it came from, it is creating a new BIB record.

How can this be corrected?

Resolution:

These records have no 001 field.

As described in the "How to Export Bib Records for Processing (and Re-Import Them)" document, the `fix_doc_001_sysno` should be used in running `p_print_03` to add an 001 to such records.

Since they have no 001, you will need to run `p_manage_36` to match these records to the BIB records they came from using ISBN or OCLC number before loading them via `p_manage_18`.

Keywords `p-manage-18` `manage_18` `manage-18`

Additional Information

load records, `fix_doc_001`, `p_print_03`, `p_manage_36`, `p_manage_18`, 001
