

How to "deep link" into Search in Database screen?

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

I would like to send users via link to syntax directly into the Search in Database page for a specific resource. How do I do this?

Resolution:

The syntax is:

<http://hostname:port/V?func=find-db-4&resource=<resourceID>>

The resource ID can be obtained either via the /M interface, from the IRD record, or via the user interface, by pointing the mouse to the resource's link to the native interface. The resource ID will appear at the bottom of the screen.

Additional Information

Deep link,info page
