## Task manager empty

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

In cataloging module, I'm connected to my database ABC10 and I'm running indexing jobs (p\_manage\_05, 01, 02, etc.), but I don't see anything in the Batch log in the Task Manager, even if I click Refresh. It's empty. However, When I go in UTIL-C-11, I can see the list of all the jobs I ran. Is there a configuration in the client I am missing?

### Resolution:

This is happening because there is no batch\_log file in the abc50 (\$usr\_library) \$data\_files directory :

```
aleph@aleph20(a20_1) ABC50> ls -lrt
total 24
-rw-r--r-- 1 aleph exlibris 9 Aug 19 05:02 que_batch_lock
-rw-r--r-- 1 aleph exlibris 5148 Aug 19 05:02 que_batch.old
-rw-r--r-- 1 aleph exlibris 5148 Aug 19 05:02 que_batch
-rw-r--r-- 1 aleph exlibris 133 Aug 19 05:02 lib_batch_log
```

As soon as you run your first batch service against the ABC50 library, the batch\_log file will be created.

(This is similar to KB 8192-489.)
