

tab_filing not working as expected

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

I added the del_subfield line to a tab_filing routine and restarted the pc and web servers, but the change has not taken effect: I get results only when I include the "\$\$a" in the search.

Resolution:

After making changes to tables involved in indexing (such as tab11_acc, tab_11_word, tab11_ind, tab00.eng, tab_filing, tab_word_breaking, and, in certain cases, tab_expand), you need to do:

util e/2 to stop the ue_01 indexing daemon,
util c/1 to verify that it is stopped, then
util e/1 to restart it.

Additional Information

indexing, table changes
