
abc50 batch queue not working properly

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01
-

Description:

abc50 jobs just sit in the queue. I delete the several submitted jobs from the queue, stop queue, start queue, submit again, job just sits there.

util c/1 showed that the abc50 batch que was not running. We did util c/2 to start it but it did not start.

We took the actions described in KB 16384-22097 (renaming batch_que, kill lib_batch, etc.). The job appears in the queue but is still was not executed.

Resolution:

I see the following errors in the \$alephe_scratch/jobd.log:

```
ABC3 p_union_04 ABC30
Error: create_library_file_name - no env variable found for abc3_dev
defaulting to aleph_dev.... que_batch
aleph_que.c: No such file or directory
Load: /exlibris/aleph/u19_1/alephe/tab/tab_library_group
...
...
```

Performing Jobs:

```
-----
ABC5 p_file_20 ABC50,patron_address_load.dat,patron_load,Y,%+,ALEPH_SEQ,
Error: create_library_file_name - no env variable found for abc5_dev
defaulting to aleph_dev.... que_batch
aleph_que.c: No such file or directory
```

This problem is like KB 8192-4056. The library code, in column 5 of the job_list entry, is shifted one column too far to the right. This is true of both the p_file_20 and the p_union_04.

```
! 2 3 4 5 6 7
!!-!!!!!!-!-!!!!!!-!!!!!!-!!!!!!-!!!!!!-!!!!!!-!!!!!!-!!!!!!
! Patron Loader (PLIF)
W2 22:15:00 Y ABC50 p_file_20 ABC50,patron_address_load.dat,patron_load,Y,%+,ALEPH_SEQ,
```

Please correct these and restart the job daemon (util e/15).
