## How to Add a Field to Multi-Field Search

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

In the GUI when I choose "multi field search" I get a list of fields. How can I add the option to search for "place" in multi field?

### Resolution:

To define the list of fields for a Find Multi-Field query, edit the `pc_tab_sear.lng` file. The FF lines define the multi field search, as the header states:

FF - FIXED FIELD - For Multi-Field Search.

First make sure you have a word index for Place:

```
XXX01/tab/tab11_word
```

```
260## a 03 WPL
```

Then, add the field to the FF line of `XXX01/tab/pc_tab_sear.eng`

```
FF XXX01 L Place WPL
```
