 - **Product Version:** 20
-

Description:

I started running p_manage_02 by mistake in abc01. I killed it. but can't get the browse working again...
What to do?????

Resolution:

The only solution to this is to re-run p_manage_02 in abc01.

The processes shown below need to be killed:

```
aleph@aleph1(a20_1) JTS01> ps -ef | grep manage_02
aleph 26998 1 0 14:28 ? 00:00:00 csh -f p_manage_02_a ABC01,1,000000000,999999999,,01,N,N, p_manage_02 1
aleph 27041 1 0 14:28 ? 00:00:00 csh -f p_manage_02_c ABC01,1,000000000,999999999,,01,N,N, p_manage_02
aleph 27042 1 0 14:28 ? 00:00:00 csh -f p_manage_02_d ABC01,1,000000000,999999999,,01,N,N, p_manage_02
aleph 27043 1 0 14:28 ? 00:00:00 csh -f p_manage_02_d1 ABC01,1,000000000,999999999,,01,N,N, p_manage_02
aleph 30390 26998 84 15:13 ? 00:04:33 /exlibris/aleph/a20_1/aleph/exe/rts32 b_manage_02_a
```

that is: kill -9 26998 27041 27042 27043 30390

and then re-submit p_manage_02.
