

Loading records with long fields overwrites fields

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Desired Outcome Goal:

Loading records with several large fields 970 (including table of contents) leads to deletion of fields which come after field 970, e.g. CAT field. How to avoid the deletion of fields?

Procedure:

Fields are loaded in the order assigned in xxx01/tab/tab01.lng. Put field 970 at the end of the table to avoid other fields to be deleted.
