

Additional Patron ID Needed on Notices

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We need to display student's additional ID (20) on notices. The tags appear in the raw XML, but there is no data.

Resolution:

TO-BLANK suppresses the field content in report forms. As long as TO-BLANK appears in global.trn (or the form-specific *.trn) next to field name z302-key-20, only the field name (z302-key-20) can appear in your output files (*.xmlsl). The field contents will never appear.

Remove the following line from global.trn:

```
z302-key-20 TO-BLANK S
```

You'll need to run UTIL / I / 6 afterwards to update the forms on the PC.

Notes:

[1] z302 is a virtual table created from z303 and z304.

[2] If no ID field = 20 is entered in the patron record (say, a certain patron only has 00 and 01 ID fields), then the field name (z302-key-20) will not appear in the output file.
