

Batch queue not working properly

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20

Description:

The ABC01 batch queue is not working properly. So far I found the following problems:

1. Batch queue can't be stopped within UTIL tool. I have to use UNIX kill command.
2. I renamed the abc01 \$data_files/que_batch,etc., as described in KB 16384-22097 to try to fix.
3. Jobs submitted through the GUI Services or the job_list often disappear without being processed.

Resolution:

I saw this in the abc01 \$data_files/lib_batch_log:

```
Sat Dec 15 03:21:35 aleph *** executing /exlibris/aleph/a18_1/aleph/proc/p_manage_15 with parameters ABC30,,Y,delete-unlinked-all-abc30.out,04,
```

Note that the executing is for "ABC30" -- which is wrong since this is ABC01.

This is caused by this job_list entry:

```
06 02:30:00 Y ABC01 p_manage_15 ABC30,,Y,delete-unlinked-all-abc30.out,04,
```

The library is ABC01 but the parameter in column 7 is ABC30. Please correct and restart the job daemon (UTIL-E-15).
