

Put svn in aleph user path

- **Article Type:** General

-

Description:

We're starting to use Subversion to track Aleph table changes. Our instance of svn is at /opt/CollabNet_Subversion/bin/svn on both the staging and production servers.

We'd like to put the directory /opt/CollabNet_Subversion/bin in the path for both production and staging, thereby saving us a few keystrokes. How would we go about doing this?

Resolution:

The directory needs to be added in \$alephe_root/aleph_start:

```
setenv PATH "${PATH}:/opt/CollabNet_Subversion/bin"
```

```
setenv LD_LIBRARY_PATH "${LD_LIBRARY_PATH}:/opt/CollabNet_Subversion/bin"
```

(Adding it to both may not be necessary, but it can't hurt.)

And then do: "source aleph_start" to make the change be in effect.
