

## System Cleanup Recommendations to Free Disk Space

- **Product:** SFX
- **Product Version:** 4
- **Relevant for Installation Type:** Local

---

### Description

For proper SFX functionality, the /exlibris mount must have at least 10% of available disk-space.

In order to check the disk space, log onto the SFX server, and run:

```
df -h
```

Look for the following in the output:

```
Filesystem      Size  Used Avail Use% Mounted on
<>
                350G 166G 185G  48% /exlibris
```

The Use% should be less than 90%.

### Resolution

1. Log into the server as the SFX instance user.
2. From anywhere in the server, type:

```
server_admin_util
```

3. Choose:

```
2 Filesystem maintenance
```

4. Select one of the following options to run a cleanup task:

```
1 Clean /exlibris/sfx_ver/sfx4_1/tmp/ (only by sfxglb41)
2 Clean Apache log
3 Clean Mysql log
4 Clean /exlibris/sfx_ver/sfx4_1/<instance>/logs/
5 Clean /exlibris/sfx_ver/sfx4_1/<instance>/dbs/scratch/
6 Clean /exlibris/sfx_ver/sfx4_1/<instance>/export/
```

For options 1, 4, 5 and 6, the following is displayed:

```
Prompt for removal of each file? [Y/n]
```

Please see the "File System Maintenance" section of the [SFX System Administration Guide.pdf](#) for detailed information regarding each of these tasks.

## Additional Information

Information regarding suggested frequencies for the maintenance tasks is available in Appendix C - "Maintenance Task Checklist" of the [SFX System Administration Guide.pdf](#)
