## Location in Web Holdings Item detail has \$i and \$j reversed.

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

On the Item detail page created by item-global-body, where is the call number defined?

The \$0700 field is displaying the call number but in our the \$i and \$j are reversed.

### Resolution:

You need to change the order of the subfield lines in the ./xxx50/tab/edit\_field.eng LOC D entry so i is before j.

If "B" is specified in edit\_field.eng, column 5, the subfields are re-ordered to this order, regardless of their order in the record.

The distributed ./usm50/tab/edit\_field.eng has the j before the i in the LOC D entry.

{ The ./www\_f/www\_f\_item\_edit program calls ./com/edit\_z30\_location which calls ./com/edit\_field.cbl, looking for "LOC " "D". (Or, if no "D", then "#".)}
