

ACQ: RTEs when saving new item in Bindery Maintenance

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 8.1.2
-

Symptoms

Acquisitions gives run-time errors 91 and 97 and shuts down if a newly created item record isn't first closed and then reopened before a second save operation is attempted.

Defect Status

VYG-491 is resolved in Voyager 8.1.2 and higher.

Replication Status

- Log in to Acquisitions and go to Bindery Maintenance.
- Search for a serial title, select one, and choose Bind.
- Create a new volume (Create New Volumes).
- Click on the Item button to open a new item record.
- Add a barcode and click the Save Item to Database icon.
- Without closing the Item record, click the Save Item to Database icon a second time (with or without editing).
- Get: Run-time error '91': Object variable or With block variable not set
- Click OK. Item record closes and then get: Run-time error '97': Can not call friend function on object which is not an instance of defining class.
- Click OK. Acquisitions closes.

Workaround

Close item record after initial save operation and reopen for further edits.
