

Error Messages

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

Where can I find a list and description of all error messages used in the MetaLib user interface?

Resolution:

A list of messages used in the MetaLib User Interface can be found in the file `./insNN/tab/www_heading.lng`. The file can be accessed on the server and includes two columns. The first column specifies a numerical code used by the program and should not be changed. The second column specifies the message to be displayed to end users. This message can be edited/localized.
