
What is Rosetta's default audio/video player?

- **Article Type:** Q&A
 - **Product:** Rosetta
 - **Product Version:** 3.1
-

Question

What is Rosetta's default audio/video player?

Answer

The wjplayer is integrated into Rosetta as the default audio/video player up to version 3.2.

Additional Information

- * List of Rosetta-supported file extensions: <http://www.longtailvideo.com/support/jw-player/28836/media-format-support/>
- * Note that all the other files (not included) will prompt download if there is no available player on the workstation (or the browser's plugin player).
- * It is recommended or larger audio files to make a smaller derivative copy for delivery (that is supported by Rosetta's audio player).
- * To add remove audio file extensions: Advanced Configuration > Delivery > File Delivery Rules > Audio Delivery Rule Details > File Extensions
- * Delivery URL for testing: `http://<hostname>:1801//delivery/DeliveryManagerServlet?dps_pid=IE####`
