## Title request screen displays "v." for each copy of title

- **Article Type:** General

### Description:

Title requests are not working properly in certain cases: the title-request screen displays "v." for each copy of the title -- even though this title is not multi-volume and these items are multiple copies of the title, not multiple volumes.

### Resolution:

The Title request display uses the z30\_enumeration\_a field to distinguish multi-volume titles -- in which case you need to display each volume. If this field is populated, it assumes that the title is multi-volume.

ABC50 item 003895422-000050 has "c.3" in the z30\_description field and "3" in the z30\_enumeration\_a. This title is not multi-volume and the inclusion of the "3" in the z30\_enumeration\_a is incorrect.

I used SQL to delete the "3" from the z30\_enumeration\_a field of item 003895422-000050. The title-request for this title now displays correctly.

The following SQL shows that there are 27,177 cases in abc50 where the z30\_description has 'c.' and the z30\_enumeration\_a is not null.

```
SQL> select count(*) from z30 where z30_description like 'c.%' and z30_enumeration_a is not null;
```

```
COUNT(*)
```

```
-----  
27177
```

You should:

1. confirm that these are cases of multiple copies rather than multi-volume
  2. run p\_file\_03 to back up the z30 table
  3. Use SQL to make the z30\_enumeration\_a = null when z30\_description like 'c.%'.
