

Google Export Implementation Document

- **Article Type:** General
 - **Product:** SFX
 - **Product Version:** 3
-

Description:

SFX currently allows, when exporting active portfolio information in the Google Scholar export format, to select getFullTxt, getSelectedFullTxt, getAbstract, getTOC and getHolding services.

In the export file, all activations will get the label 'electronic', regardless of serviceType.

While Google accepted this in the past, they have now requested that this has to be changed as they will only be displaying the SFX link on top of the citation if the item type 'electronic' is only associated with full text. To ensure ongoing services for end users on Google Scholar, this change needs to be implemented immediately.

Resolution:

Please see attached document for further details.
