

## Does Self-Check use z111 table?

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

Does the Self-Check server processing use the z111 table? (If it does, it limits the times when we could rerun p\_manage\_111 more than if it does not use that table.)

(keywords: p-manage-111 manage-111 manage\_111 p\_manage\_111)

### Resolution:

The self-check server does not use the z111 (patron keywords) table.
