Description:

The browse index in the GUI is not filtering for the sublibrary ABC12.

The Brief List which you see when you click on a heading resulting from a Browse in this base.

Resolution:

There's a problem in the "Find command" (column 9) for the ABC12 base in tab_base.eng:

```
BOROUGH BMCC LOCAL BM CUN01 CUN01 Y (wow=bm or  
wow=al) not (wst=suppressed or wst=deleted or wst=circ-created pr wcl=SSWEB)
```

There's a "pr" separating the wst=circ-created and wcl=SSWEB strings; this should, of course, be "or".
