Description:

How does p_print_04 differ from p_print_01?

Resolution:

Regardless of how many or few record numbers you include in the input file, p_print_04 will read *all* of the Z01's in the Text-from/Text-to range of the ACC heading type ("Catalog Type") you specify. And it will create a Z05 and Z110 record for each.

p_print_01 is similar except it works with the doc record only, doesn't read the Headings or create Z05 sets like the p_print_04 does.

It would seem that p_print_01 (or _08 or _09) is a better choice than p_print_04 for printing a catalog of relatively few records. We suggest that you not use p_print_04.

(Note: p_print_01 does have the option of including cross-references. If that is essential, then you'd need to use print-04.)

Additional Information

p_print_04, p_print_01
