## xxx01.Znn\_ID; ORA-01652 unable to extend temp segment in tablespace xxxxx

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

You see this message in an index job log or an ue\_01 log:

```
CREATE UNIQUE INDEX xxx01.Znn_ID...  
ORA-01652: unable to extend temp segment by nnnn in tablespace xxxxxxx
```

### Resolution:

This indicates a problem with the Znn\_ID Oracle index. The index has not been created. (Doing util a 17/14 should confirm this.)

You need to either decrease the secondary allocation for this Oracle index or add a file to the tablespace in which it resides. Most likely, the latter. And then you need to run util a/17/2 to rebuild the index.

Note: If the message says "... in tablespace TEMP", then consult KB 16384-11346.

---

## Additional Information

temp segment, tablespace
