
Manual h and i Subfields in Item Call Number?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

Do our catalogers have to manually add \$\$h and \$\$i subfield labels in the Item record Call Number field?

Resolution:

The ALEPHCOM \ \$data_tab \ alephcom.ini : [ExpandField] ItemLocation1Field=5 setting will provide a form popup to assist in the call number construction.

Subfield key: \$\$kprefix \$\$hcall number \$\$iitem part \$\$msuffix \$\$2source.

Note that the k, m, and 2 subfields have drop-down lists available. The Browse button provides a call-number browse function.

[ExpandField]

; Describe the Expand button Status of special fields :

; 1 - Regular (pc_tab_exp_field) (default)

; 2 - Non Visible

; 3 - Special (for location=close stack)

; 4 - Special (for location=location index list)

; 5 - Special (for location=852 form)

; 6 - Special (for location=852 form, including Author Number calculation method)

;

ItemLocation1Field=5

ItemLocation2Field=1

SerialLocation1Field=5

SerialLocation2Field=5
