## Normalization routine to remove the 900 field

- **Article Type:** Q&A
  - **Product:** Alma
- 

### Question

I want to remove the 900 field from all bibliographic records only if it has subfield “a” with text “local”. How do I do it?

---

### Answer

Here is the syntax for this normalization routine and an example. Note the “if (exists ...)” syntax

```
rule "remove 900 field if it has subfield a with local"  
when  
(TRUE)  
then  
removeField "900" if (exists "900.a.Local")  
end
```
