Description:

I ran manage_102 and then manage_02. I had to then re-run p_manage_02 and lost all my auth links.

Can I just run p_manage_102 to get them back or do I need to run 102, then manage_02 again? Can one ever just run 102 or 02 or must they always be run together?

Resolution:

If the p_manage_02 run has been preceded by p_manage_102, then any re-run of p_manage_02 must also be preceded by p_manage_102.

You can run p_manage_02 by itself , but, if you do so, it would need to be followed by a complete ue_08.

Note: If you were to run p_manage_02 by itself, it would need to be done with "Rebuild entire" ("1") rather than Update ("0"). You can only use "0" when it is preceded by manage_102.

See the "How To Run Index Jobs" document for more information.
