
Serials bar: "Error parsing find request" for title

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

With the Title search in the serials bar, the error is "Error parsing find request". The pc_server log shows:

SERVICE : C1011.

MODULE : OPAC Services.

DESCRIPTION: Send Find Request.

ACTION : PROGRAM : pc_sear_c1011.

str_in=(TIT = (AMERICAN LIBRARIES)).

illegal term.

aleph_ccl_expr_check_tree_c - illegal expr.

aleph_ccl_expr_check_tree_c failed.

aleph_ccl_expr_build_normal_tree_c failed. What does this mean?

Resolution:

Since this site has a "TTL" index instead of a "TIT", changing the "BIB-TIT" in the ./xxx50/tab/pc_tab_exp_field.eng SERIAL-SEARCH and ORDER-SEARCH to "BIB-TTL" should work. This eliminated the error but gave "no records found" on all searches. (This may have been because AUTO-TRUNCATE-Z01-FIND is set to "N" and we were not including "?".) Changing it to "BIB-WTI" worked.
